

Melink® Solar

Melink®

Solar PV solutions...that grow your bottom line

Developer of Large-Scale Projects

Melink is a premier solar PV developer and integrator due to our unique technical, financial and project management expertise.

We offer a wide variety of services that scale to projects from 50kW to 5MW. After reviewing your needs and completing a site analysis, our team advises you on the right panels and racking systems for your building.

In addition, we also customize the inverters and Balance of System to ensure proper performance of your installation.

The 61 kW Mound Advanced Technology Center project, helping Ohio reach its renewable energy requirements.

Our services include:

Project Development and Financing

- Capital Leases
- Power Purchase Agreements (PPAs)
- Energy Special Improvement Districts

Design & Installation

- Engineering (site analysis, design & permits)
- Procurement
- Construction (scheduling, materials, labor)
- Commissioning (start-up, testing, verification)

Maintenance & Monitoring (optional)

- Cleaning and snow removal
- Production and savings reports
- Periodic inspections
- MPower Educational Kiosk

Power Purchase Agreements allow you to purchase energy without the upfront capital investment.

The Melink Solar Canopy at the Cincinnati Zoo is 1.6 MW and covers a 7 acre parking lot.

Manufacturer of Pre-Engineered Systems

Melink makes solar power attractive, affordable and convenient for businesses, schools and homeowners with its pre-engineered solar PV system, **Ingrid™**. This 2 kW ground-mounted system has a sleek and elegant design to inspire your customers, employees and the public at large.

Conventional solar PV systems are custom designed and installed and as a result often cost-prohibitive for smaller applications. Ingrid offers customers the ability to use solar energy without having to install on the roof where it is hidden and hard to maintain and clean.

Ingrid not only provides energy but has been designed to be an architectural feature building owners can be proud to display. And in the growing green economy, it almost makes a statement that you are part of the solution for a sustainable future.

Ingrid™ Features

- Standard 2 kW size
- Sleek and elegant design
- Affordable
- Simple to install
- Easy to maintain

All wiring is hidden behind sleek racking and modular components.

Distributor of Premier Components

Melink is a distributor of premier solar PV components. We represent best-of-class solar panel, inverter and racking manufacturers around the world. We can assess your project and provide you with the options best suited to your project. Our strategic partnerships allow us to provide you with competitive pricing.

Solar Panels

- Crystalline Silicon
- Rigid Thin Film
- Flexible Thin Film

Inverters (Grid-tied)

- Small 2 - 5 kW
- Medium 10 - 50 kW
- Large 75 - 500kW

Racking

- Ground Mount
- Roof Mount
- Carports
- Trackers

Proven, Practical and Profitable

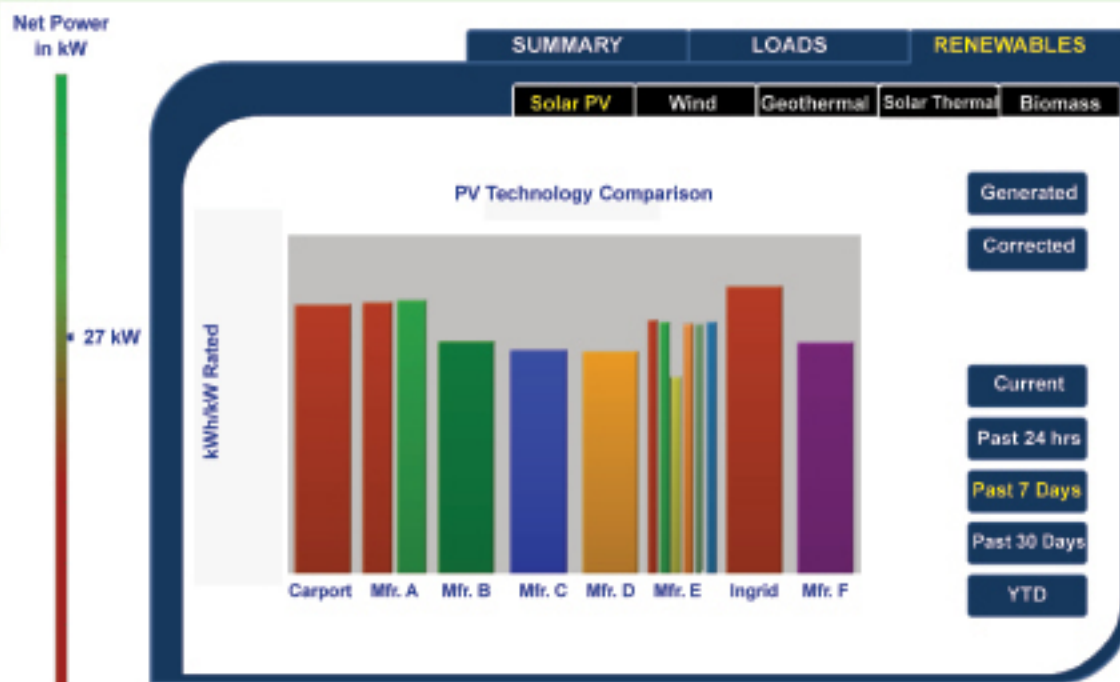

Solar PV is a mature technology and over the past few years the cost of materials has decreased dramatically. Systems are easily adapted to existing sites whether roof- or ground-mounted, and easy to maintain due to no moving parts.

Incentives have also made the benefits of solar PV systems more attractive. Local, state, and federal tax credits and rebates, along with accelerated depreciation for commercial facilities, make renewable energy cost-effective.

Melink Knows Solar

Melink Corporation is constantly researching and testing different solar PV systems at our headquarters. We currently have more than 100kW of solar PV systems installed on our building and throughout our corporate campus. We also have NABCEP-certified installers, LEED APs, and licensed PEs on staff who can advise you on the solar PV system that best fits your facility's needs.

Melink's MPower monitoring system allows us to compare all of our solar PV systems at one time.

About Melink

Melink Corporation is a provider of energy efficiency and renewable energy solutions for commercial and institutional facilities. The company offers building commissioning services, kitchen ventilation controls and solar PV systems.

Melink's corporate headquarters is LEED Platinum certified. It is also a Net-Zero Energy building making it one of the greenest buildings in the world.
